生成对抗网络实验报告

李潇逸 2111454

实验要求

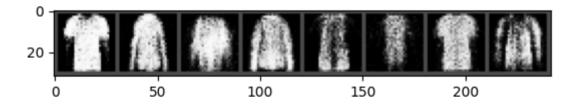

- 掌握GAN原理
- 学会使用PyTorch搭建GAN网络来训练FashionMNIST数据集

实验内容

- 老师提供的原始版本GAN网络结构(也可以自由调整网络)在FashionMNIST上的训练loss曲线, 生成器和判别器的模型结构(print(G)、print(D))
- 自定义一组随机数, 生成8张图
- 针对自定义的100个随机数,自由挑选5个随机数,查看调整每个随机数时,生成图像的变化(每个随机数调整3次,共生成15x8张图),总结调整每个随机数时,生成图像发生的变化。
- 解释不同随机数调整对生成结果的影响

实验过程

loss 曲线

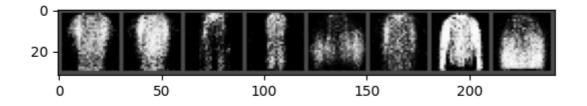

生成器和判别器的模型结构

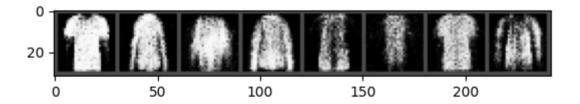

```
Discriminator(
    (fc1): Linear(in_features=784, out_features=128, bias=True)
    (nonlin1): LeakyReLU(negative_slope=0.2)
    (fc2): Linear(in_features=128, out_features=1, bias=True)
)
Generator(
    (fc1): Linear(in_features=100, out_features=128, bias=True)
    (nonlin1): LeakyReLU(negative_slope=0.2)
    (fc2): Linear(in_features=128, out_features=784, bias=True)
)
```

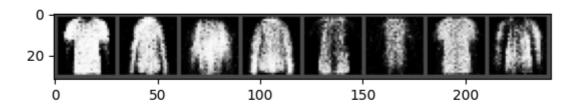

随机数选取

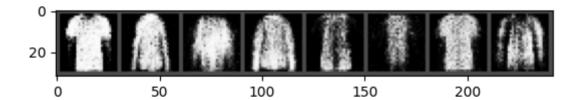

```
Random number 71 adjustments:
Adjustment 1:
Adjustment 2:
Adjustment 3:
Random number 85 adjustments:
Adjustment 1:
Adjustment 2:
Adjustment 3:
Random number 32 adjustments:
Adjustment 1:
Adjustment 2:
Adjustment 3:
Random number 7 adjustments:
Adjustment 1:
Adjustment 2:
Adjustment 3:
Random number 60 adjustments:
Adjustment 1:

单独生成的图片

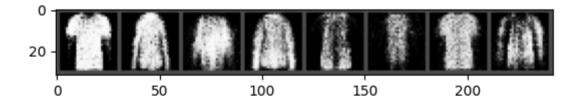

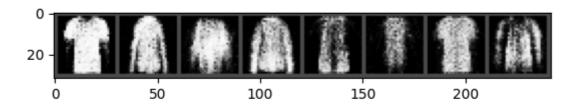

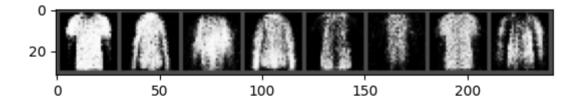

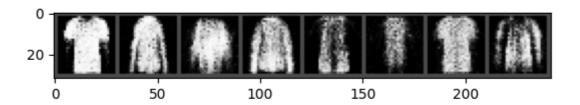

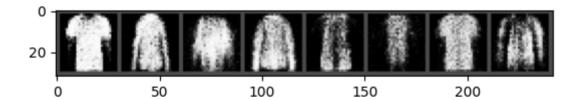

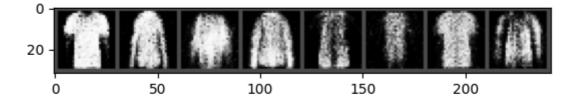

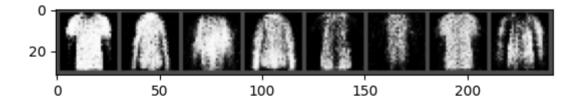

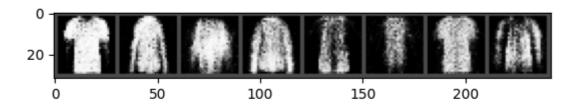

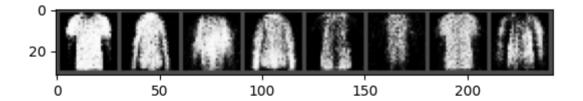

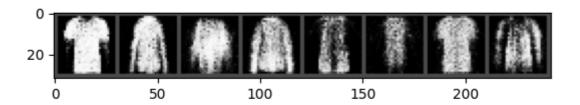

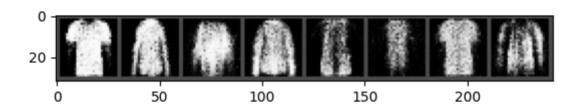

分析

- 1.71:可能导致生成器的输入向量中的某些特征发生变化,因此影响了图像的整体亮度、图案的出现位置或形状等。
- 2.85: 使某些图片亮度更亮,细节更丰富。
- 3.32: 使一些图片的纹理发生增加或删除。
- 4.7: 使一些图片的颜色和位置发生变化
- 5.60: 使图片的外观发生辩护
